

Riverside Landing to Highway 70 Landing

St. Croix National Scenic Riverway

- Canoe access
- Boat launch
- Individual campsite
- Group campsite
- Ranger station
- Rapids (class I or II)
- Drinking water
- Restrooms
- Telephone
- Visitor Information

Class I rapids exist on this stretch of river. River currents and water levels vary depending on the amount of precipitation the watershed receives, however, paddling difficulty is usually at Class I. River speeds average three miles per hour. A ledge above the Highway 48/77 bridge is best navigated by staying toward the Wisconsin side of the river. The most difficult rapids exist at the confluence of the Kettle and St. Croix rivers. Fishing boats use this stretch of river in localized areas of deeper water. Use caution in late summer or periods of drought.

International Scale of River Difficulty
Class I: Moving water with few riffles and small waves. Few or no obstructions.

Individual campsites accommodate up to 8 people and 3 tents. Group campsites accommodate up to 16 people and 6 tents.

Riverside Landing will be undergoing improvements that involve major construction during 2003. Drinking water will not be available until the renovation is complete.

Updated March 2003
